

FINAL EXAM

PCALC-II-II: STATISTICS

Spring – 2025-26

Points of attention:

- For each question, the maximum earned points are specified in the question.
- Write clearly! Answers that are not readable are not marked and don't earn marks!
- All answers should be written in English using **blue or black pens** only.
- Use the pencil only for diagrams and graphs.
- Show all the calculation steps in the given space.
- When finished, submit and sign the question paper to the invigilator.
- Any cheating/copying may result in an instant failing of the examination.

Exam Duration: 2 hours
Instructor's Name: Muhammad Kazam
Exam Date: 10/05/2026
Program: LTM

Question 1**[5 Marks]**

An Omani bank selects 3 graduate trainees from 8 applicants, of whom 5 are finance graduates and 3 are IT graduates. Determine the probability that:

a. All 3 selected trainees are finance graduates.

(2 marks)

b. At most 2 selected trainees are IT graduates.

(3 marks)

Question 2**[6 Marks]**

An oil distribution company records the number of fuel tanker deliveries per day. The probability distribution of the number of deliveries X is given in the table below. Determine the mean, variance, and standard deviation.

X	$P(X)$
5	0.1
6	0.15
7	0.3
8	0.2
9	0.15
10	0.1

Question 3**[6 Marks]**

An Omani bank reports that 25% of loan applications are rejected. If 8 applications are randomly selected, determine the probability that:

a. Exactly 4 applications were rejected.

(2 marks)

b. At most 6 applications were rejected.

(3 marks)

c. Calculate the variance of rejected loan applications.

(1 mark)

Question 4**[4 Marks]**

An Omani courier company finds that 2% of parcels are returned due to incorrect delivery addresses. If 300 parcels are sent in one day, determine the probability that:

a. None of the parcels are returned.

(2 marks)

b. At most 2 of the parcels are returned.

(2 marks)

Question 5**[5 Marks]**

- a. Find the area under the standard normal distribution curve to the left of $z = -2.15$ and to the right of $z = 1.62$. **(2 marks)**
- b. Candidates applying for a graduate trainee program in an Omani bank take a quantitative aptitude test. The scores are normally distributed with a mean of 62 and a standard deviation of 10. If only the top 25% of candidates are shortlisted, determine the minimum score needed to be in the top 25% **(3 marks)**

Question 6**[7 Marks]**

The average daily sales revenue of a retail chain in Oman is OMR 3,200. Management suspects that a new promotional strategy has increased sales. A random sample of 50 days resulted in a sample mean of OMR 3285. The population variance is 16900. At $\alpha = 0.05$, can it be concluded that the average daily sales revenue has increased.

Question 7**[7 Marks]**

Industry data indicate that 22% of logistics employees are women. A logistics company wants to determine whether the proportion of women employees in its workforce is higher. In a random sample of 150 employees, 42 are women. At the 0.05 level of significance, is there sufficient evidence to conclude that the proportion of women employees exceeds 22%?

Formula Sheet

Variance for ungrouped data	$s^2 = \frac{n \sum X^2 - (\sum X)^2}{n(n-1)}$
Variance for Probability distribution	$\sum X^2 P(X) - \left[\sum X P(X) \right]^2$
Binomial distribution	$P(x) = n C_x p^x q^{n-x}$
Poisson distribution	$P(x) = \frac{e^{-\lambda} \lambda^x}{x!}$
Z-test for population mean	$z = \frac{\bar{X} - \mu}{\frac{\sigma}{\sqrt{n}}}$
t-test for population mean	$t = \frac{\bar{X} - \mu}{\frac{s}{\sqrt{n}}}$
Z-test for population proportion	$z = \frac{\hat{p} - p}{\sqrt{\frac{pq}{n}}}$
χ^2 -test	$\chi^2 = \frac{(n-1)s^2}{\sigma^2}$
